

Thematic Work Sessions

Dear Trainee,

Thank you for participating in our summer school "Atomic Layer Deposition: Method and Applications", that is getting closer.

As you can see in the final program three thematic workshops will be organized on the following topics, related to the seminars held during early afternoon:

- Electronic/Solar Cells Applications;
- Templates materials;
- Energy applications.

The aim of these sessions is to share information, gain experience from each other, collect ideas and suggestions to solve eventual problems, and create a network among ALD users. During sessions each one of you is invited to hold a 5 minute oral presentation (preferred format ppt/key, lenght 5/6 slides) about one of his research topic related to ALD, highlighting:

1. context and objectives of the work (be schematic it's not necessary to discover everything infringing eventual IP agreements, don't be too educational because you are talking to an audience of researchers, don't include long presentation of your group or institution);
2. reasons for which ALD is selected as the deposition technique;
3. advantages of using ALD instead of other synthesis/deposition techniques;
4. eventual problems that you face and you want to share with others to find ideas for solutions.

Please send the title of your topic within Tuesday June the 30th to laura.borgese@unibs.it.

Looking forward to having you with us.

Best regards,

The Organizers
